BibliographicEntry

GET /addTargetBibliographicResource   [Up](#)

(**addTargetBibliographicResource**)

Given the _id of a bibliographic entry and the _id of a target, i.e., a cited, bibliographic resource, this service takes care of setting all related properties in a consistent way. More precisely, the following three things happen:

1. The 'status' of the bibliographic entry will be changed to VALID
2. The 'references' property of the bibliographic entry will be set to the _id of the target bibliographic resource
3. The 'cites' property of the parent resource of the entry will be extended with the _id of the target bibliographic reource

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Query parameters

bibliographicEntryId (required)
Query Parameter — The _id of the subject bibliographic entry that should point to the target bibliographic resource

bibliographicResourceId (required)
Query Parameter — The _id of the target bibliographic resource which the bibliographic entry should point to

Return type
[BibliographicResource](#)

Example data
Content-Type: application/json

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/json`
- `image/png`
- `application/pdf`

Responses
200
Success; In case the operation suceeds, the updated source bibliographic resource including the respective bibliographic entry will be returned BibliographicResource
default
Error ErrorResponse

POST /bibliographicEntries   Up

(**create**)

creates a bibliographic entry for the given bibliographic resource

Consumes
This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Request body

bibliographicEntry **BibliographicEntry** (required)
Body Parameter — A bibliographic entry which should be saved

Query parameters

bibliographicResourceId (required)
Query Parameter — The _id of the bibliographic resource to which the new bibliographic entry should be appended

Return type
BibliographicEntry

Example data

Content-Type: application/json

```
{
  "ocrData" : {
    "date" : "date",
    "volume" : "volume",
    "comments" : "comments",
    "journal" : "journal",
    "marker" : "marker",
    "coordinates" : "coordinates",
    "title" : "title",
    "namer" : "namer",
    "detector" : "detector",
    "authors" : [ "authors", "authors" ]
  },
  "references" : "references",
  "identifiers" : [ {
    "scheme" : "scheme",
    "literalValue" : "literalValue"
  }, {
    "scheme" : "scheme",
    "literalValue" : "literalValue"
  } ],
  "scanId" : "scanId",
  "_id" : "_id",
  "bibliographicEntryText" : "bibliographicEntryText",
  "status" : "status"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

200
Success [BibliographicEntry](#)
default
Error [ErrorResponse](#)

GET /getExternalSuggestionsByQueryString   [Up](#)

(getExternalSuggestionsByQueryString)

Retrieves external br suggestions for a given query string related to a bibliographic entry.

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Query parameters

query (required)
Query Parameter — The query string for which the suggestions shall be retrieved

k (optional)
Query Parameter — Top k results that shall be retrieved (the default value is 10)

Return type
array[array[BibliographicResource]]

Example data
Content-Type: application/json

```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

200
Success
default
Error ErrorResponse

GET /getInternalSuggestionsByQueryString   [Up](Up)

(getInternalSuggestionsByQueryString)

Retrieves internal br suggestions for a given query string related to a bibliographic entry.

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Query parameters

query (required)
Query Parameter — The query string for which the suggestions shall be retrieved

k (optional)
Query Parameter — Top k results that shall be retrieved (the default value is 10)

Return type
array[array[BibliographicResource]]

Example data
Content-Type: application/json

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses
200
Success
default
Error ErrorResponse

GET /getPrecalculatedSuggestions/{id}   [Up](Up)

(getPrecalculatedSuggestions)

Retrieves external br suggestions (precalculated) for a given bibliographic entry.

Path parameters

id (required)
Path Parameter — The id of the be for which the precalculated suggestions shall be retrieved

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type
array[array[BibliographicResource]]

Example data
Content-Type: application/json

```

Produces
This API call produces the following media types according to the Accept request header; the media
type will be conveyed by the Content-Type response header.

- `application/json`
- `image/png`
- `application/pdf`

Responses
200
Success
default
Error ErrorResponse

GET /getToDoBibliographicEntries   [Up](Up)

(getToDoBibliographicEntries)

Retrieves the BEs that are not processed by a librarian yet.

Consumes
This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Query parameters

  scanId (optional)

Query Parameter — The Id of the Scan for which the BEs shall be retrieved

Return type
array[BibliographicEntry]

Example data
Content-Type: application/json

```
[ {
  "ocrData" : {
    "date" : "date",
    "volume" : "volume",
    "comments" : "comments",
    "journal" : "journal",
    "marker" : "marker",
    "coordinates" : "coordinates",
    "title" : "title",
    "namer" : "namer",
    "detector" : "detector",
    "authors" : [ "authors", "authors" ]
  },
  "references" : "references",
  "identifiers" : [ {
    "scheme" : "scheme",
    "literalValue" : "literalValue"
  }, {
    "scheme" : "scheme",

Error **ErrorResponse**

DELETE /bibliographicEntries/{id}   **Up**

(remove)

Deletes a given bibliographic entry by id.

Path parameters

id (required)
Path Parameter — The _id of the bibliographic entry to be deleted.

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Return type
BibliographicEntry

Example data
Content-Type: application/json

```
{
  "ocrData" : {
    "date" : "date",
    "volume" : "volume",
    "comments" : "comments",

GET /removeTargetBibliographicResource   [Up](#)

(removeTargetBibliographicResource)

Given the _id of a bibliographic entry this service clears all properties related to a potential target resource in a consistent way. More precisely, the following three things happen:

1. The 'references' property of the bibliographic entry will be cleared
2. The _id of the old target resource will be removed from teh 'cites' property of the parent resource of the entry
3. The 'status' of the bibliographic entry will be changed to OCR_PROCESSED --> Is this always ok? Note that the old target bibliographic resource will not be deleted.

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Query parameters

bibliographicEntryId (required)
Query Parameter — The _id of the subject bibliographic entry that should point to the target bibliographic resource

Return type
[BibliographicResource](#)

Example data
Content-Type: application/json

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/json`
- `image/png`
- `application/pdf`

Responses
200
Success; In case the operation suceeds, the updated source bibliographic resource including the respective bibliographic entry will be returned BibliographicResource
default
Error ErrorResponse

PUT /bibliographicEntries/{id}   [Up](Up)

(update)

Updates a given bibliographic entry by id. Note that the status needs to be changed to VALID if this service is called after validation by a librarian. Properties that are not given with the update data are preserved.

Path parameters

id (required)
Path Parameter — The _id of the bibliographic entry to be updated.

Consumes
This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Request body

bibliographicEntry BibliographicEntry (required)
Body Parameter — A bibliographic entry with new values to be updated.

Return type
BibliographicEntry

Example data
Content-Type: application/json

```
{
  "ocrData" : {
    "date" : "date",
    "volume" : "volume",
    "comments" : "comments",
    "journal" : "journal",
    "marker" : "marker",
    "coordinates" : "coordinates",
    "title" : "title",
    "namer" : "namer",
    "detector" : "detector",
    "authors" : [ "authors", "authors" ]
  },
  "references" : "references",
  "identifiers" : [ {
    "scheme" : "scheme",
    "literalValue" : "literalValue"
  }, {
    "scheme" : "scheme",
    "literalValue" : "literalValue"
  } ],
  "scanId" : "scanId",
  "_id" : "_id",
  "bibliographicEntryText" : "bibliographicEntryText",
  "status" : "status"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses
200
Success BibliographicEntry
default
Error ErrorResponse

BibliographicResource

DELETE /bibliographicResources

Up

(deleteAll)

Deletes all (!) bibliographic resources (may be removed in a later stage)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type
SuccessResponse

Example data
Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses
200
Success <u>SuccessResponse</u>
default
Error <u>ErrorResponse</u>

DELETE /bibliographicResources/{id}   <u>Up</u>

(deleteSingle)

Deletes a single bibliographic resource by id

Path parameters

id (required)
Path Parameter — The internal identifier of the bibliographic resource

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type
<u>SuccessResponse</u>

Example data
Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses
200
Success <u>SuccessResponse</u>
default
Error <u>ErrorResponse</u>

GET /bibliographicResources/{id}

(get)

Returns a single bibliographic resource by id

Path parameters

id (required)
Path Parameter — The internal identifier of the bibliographic resource

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Return type

[BibliographicResource](#)

Example data

Content-Type: application/json

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses
200
Success **BibliographicResource**

default
Error ErrorResponse

GET /bibliographicResources   [Up](Up)

(list)

Returns a list of bibliographic resources

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type

array[BibliographicResource]

Example data

Content-Type: application/json

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses
200
Success
default
Error ErrorResponse

GET /bibliographicResourcesOC   [Up](Up)

(listOC)

Returns a list of bibliographic resources in OC format

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type
array[BibliographicResourceOpenCitations]

Example data
Content-Type: application/json

POST /bibliographicResources

(save)

Saves a new bibliographic resource into the database

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Request body

bibliographicResource BibliographicResource (required)
Body Parameter — A bibliographic resource to be saved in the database

Return type

BibliographicResource

Example data

Content-Type: application/json

```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses
200
Success BibliographicResource

default
Error [ErrorResponse](#)

GET /setValid [Up](#)

(setValid)

Sets a bibliographic resource to VALID, i.e. "completely linked", given it's internal identifier. The system internally sets all bibliographic entries of the bibliographic resources to OBSOLETE that are not linked and therefore not valid. We do this in order to deal with duplicate reference extractions.

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Query parameters

id (required)
Query Parameter — The internal identifier of the resource

Return type
[BibliographicResource](#)

Example data
Content-Type: application/json

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png

- `application/pdf`

Responses
200
Success [BibliographicResource](#)
default
Error [ErrorResponse](#)

PUT /bibliographicResources/{id}   [Up](#)

(update)

Updates an existing bibliographic resource

Path parameters

id (required)
Path Parameter — The _id of the bibliographic resource to be updated.

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Request body

bibliographicResource [BibliographicResource](#) (required)
Body Parameter — A bibliographic resource to be updated

Return type
[BibliographicResource](#)

Example data
Content-Type: application/json

  }
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/json`
- `image/png`
- `application/pdf`

Responses
200
Success BibliographicResource
default
Error ErrorResponse

Scan

GET /correctReferencePosition [Up](Up)

(correctReferencePosition)

Send a processing request to the reference extraction component for a single reference with human-corrected bounding box position

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Query parameters

scanId (required)
Query Parameter — The unique id of the scan which should be send to the reference extraction component

coordinates (required)
Query Parameter — The new coordinates of the bounding box separated by single space, i.e. format x1 y1 x2 y2

bibliographicEntryId (optional)
Query Parameter — The id of the bibliographic entry that should be set to obsolete

Return type
BibliographicEntry

Example data
Content-Type: application/json

```
{
  "ocrData" : {
    "date" : "date",
    "volume" : "volume",
    "comments" : "comments",
    "journal" : "journal",
    "marker" : "marker",
    "coordinates" : "coordinates",
    "title" : "title",
    "namer" : "namer",
```

```
    "detector" : "detector",
    "authors" : [ "authors", "authors" ]
  },
  "references" : "references",
  "identifiers" : [ {
    "scheme" : "scheme",
    "literalValue" : "literalValue"
  }, {
    "scheme" : "scheme",
    "literalValue" : "literalValue"
  } ],
  "scanId" : "scanId",
  "_id" : "_id",
  "bibliographicEntryText" : "bibliographicEntryText",
  "status" : "status"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

200
Success **BibliographicEntry**
default
Error **ErrorResponse**

GET /scans/{id}   **Up**

(get)

Returns a single scan by id

Path parameters

id (required)
Path Parameter — The internal identifier of the scan

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type

File

Example data

Content-Type: application/json

```
""
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json

- `image/png`
- `application/pdf`

Responses
200
Returns Scan [File](#)
default
Error [ErrorResponse](#)

GET /getToDo   [Up](#)

(getToDo)

Retrieves the BRs including their associated parts and scans that are either not processed or processed by the OCR-component or retrieved from external.

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Query parameters

status (required)
Query Parameter — The list of status for which the ToDo-list shall be retrieved

Return type

array[[ToDo](#)]

Example data

Content-Type: application/json

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

200
Success
default
Error ErrorResponse

DELETE /scans/{id}   Up

(remove)

Deletes a single scan by id

Path parameters

id (required)
Path Parameter — The internal identifier of the scan

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type

SuccessResponse

Example data

Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

200
Success SuccessResponse
default
Error ErrorResponse

POST /saveResource

(saveResource)

Saves a bibliographic Resource given it's identifier and resourceType as well as additional information

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Form parameters

identifierScheme (required)
Form Parameter — The scheme of the identifier of the resource

identifierLiteralValue (required)
Form Parameter — The literal value of the identifier of the resource

firstPage (optional)
Form Parameter — The number of the first page of the resource (for journal articles, book chapters etc).

lastPage (optional)
Form Parameter — The number of the last page of the resource.

textualPdf (optional)
Form Parameter — Whether the references file (if given) is a PDF with textual content

binaryFile (optional)
Form Parameter — The reference page (binary file)

stringFile (optional)
Form Parameter — The reference page (string), e.g. the html code of an online reference page

embodimentType (optional)
Form Parameter — The embodiment type (PRINT or DIGITAL) of the resource

resourceType (required)
Form Parameter — The type of the resource.

Return type
BibliographicResource

Example data
Content-Type: application/json

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/json`
- `image/png`
- `application/pdf`

Responses

200

Success [BibliographicResource](#)

default

Error [ErrorResponse](#)

GET /triggerOcrProcessing   [Up](#)

(triggerOcrProcessing)

Send a processing request to the OCR component.

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Query parameters

   id (required)
   Query Parameter — The unique id of the scan which should be send to the OCR component

Return type

[BibliographicResource](#)

Example data

Content-Type: application/json

User

POST /addFeed   [Up](Up)

(addFeed)

Adds an RSS or Atom Feed the users feed list

Consumes
This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Request body

feed **Feed** (required)
Body Parameter — The feed object consisting of name (may be user specified) and URL of the feed

Return type
User

Example data
Content-Type: application/json

```
{
  "password" : "password",
  "feeds" : [ {
    "name" : "name",
    "_id" : "_id",
    "url" : "url"
  }, {
```

```
    "name" : "name",
    "_id" : "_id",
    "url" : "url"
  } ],
  "username" : "username"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

Success User
default
Error ErrorResponse

DELETE /deleteFeed/{id}   Up

(deleteFeed)

Deletes an RSS or Atom Feed from the users feed list

Path parameters

id (required)
Path Parameter — The id of the feed to be deleted from the users feed list

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type
User

Example data
Content-Type: application/json

```
{
  "password" : "password",
  "feeds" : [ {
    "name" : "name",
    "_id" : "_id",
    "url" : "url"
  }, {
    "name" : "name",
    "_id" : "_id",
    "url" : "url"
  } ],
  "username" : "username"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

GET /fetchFeeds

(fetchFeeds)

Fetches all the feeds entries a user subscribed to

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type
array[array[FeedEntry]]

Example data
Content-Type: application/json

POST /login   [Up](Up)

(**login**)

Login service

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Request body

user [User](#) (required)
Body Parameter — The user object consisting of username and password

Return type

[User](#)

Example data

Content-Type: application/json

```
{
  "password" : "password",
  "feeds" : [ {
    "name" : "name",
    "_id" : "_id",
    "url" : "url"
  }, {
    "name" : "name",
    "_id" : "_id",
    "url" : "url"
  } ],
  "username" : "username"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/json`
- `image/png`
- `application/pdf`

Responses

200
Success [User](#)
default
Error [ErrorResponse](#)

GET /logout   [Up](#)

(logout)

Logout service

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Return type

[SuccessResponse](#)

Example data

Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

POST /signup   Up

(signup)

Signup service

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Request body

user **User** (required)
Body Parameter — The user object consisting of username and password

Return type

User

Example data

Content-Type: application/json

```
{
  "password" : "password",
  "feeds" : [ {
    "name" : "name",
    "_id" : "_id",
    "url" : "url"
  }, {
    "name" : "name",
    "_id" : "_id",
    "url" : "url"
  } ],
  "username" : "username"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Utils

GET /getCrossref   Up

(getCrossref)

Gets parsed data from Crossref (needed for debugging)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Query parameters

query (optional)
Query Parameter — The query string

Return type
SuccessResponse

Example data
Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

GET /getGVI   Up

(getGVI)

Gets parsed data from GVI (needed for debugging)

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Query parameters

query (optional)
Query Parameter — The query string

Return type

[SuccessResponse](#)

Example data

Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/json`
- `image/png`
- `application/pdf`

Responses

Error [ErrorResponse](#)

GET /getK10Plus   [Up](#)

(getK10Plus)

Gets parsed marc from k10+zentral (needed for debugging)

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/json`
- `multipart/form-data`

Query parameters

query (optional)
Query Parameter — The query string

Return type

[SuccessResponse](#)

Example data

Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

Error [ErrorResponse](#)

GET /getSWB   [Up](#)

(getSWB)

Gets parsed marc from SWB (needed for debugging)

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Query parameters

query (optional)
Query Parameter — The query string

Return type
[SuccessResponse](#)

Example data
Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

Error [ErrorResponse](#)

POST /loadBibliographicResources

(loadBibliographicResources)

Loads bibliographic resources into the database given a JSON file

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Form parameters

file (required)
Form Parameter — A textual file with bibliographic resources to store in the database (has to be json)

Return type
SuccessResponse

Example data
Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses
200
Success SuccessResponse
default
Error ErrorResponse

POST /log

(log)

Logs a json object.

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Request body

logObject LogRequest (optional)
Body Parameter — The object to log.

Return type
SuccessResponse

Example data

Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses

default

Error ErrorResponse

GET /stats   Up

(stats)

Returns a bunch of statistics reflecting the current status of the system

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/json
- multipart/form-data

Return type

SuccessResponse

Example data

Content-Type: application/json

```
{
  "message" : "message"
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
- image/png
- application/pdf

Responses
